Exercise

Build a Twitter profile clone:

1. Take the [@ironhack](#) profile as an example.
2. Only worry about the desktop size. No need to use responsive helpers.
3. Get as close as you can to the layout, but use components as they're supposed to be used. Don't try to stitch together components with others just for the sake of appearance.

Start with the basic layout, how many rows do you see?
how many columns inside (if any)?

Maybe it's a good idea to write down the different components you identify in the page prior to start writing a single line of HTML.

On Twitter this navigation bar is fixed to the top.
You don't have to worry about that.

A user could have a 1000x100 image up to a 1000x2000 image. Make sure it maintains the right proportions across profiles.
